ATTC ... Investment in People

People have made American Torch Tip the company it is today. People operate the machines, maintain the equipment, oversee quality, serve our customers, research and develop new products, promote, sell, fill the orders and ship the products, They also do the billing, track industry trends, and institute new ways of doing things, be it on the manufacturing floor or in the office. They give ATTC its vitality ... its personality.

Ongoing training and a strong work ethic, make ATTC's people the company's single, most critical investment. Place them in a harmonious work environment with state-of-the-art equipment and you have...

ATTC — the number one manufacturer of welding, cutting, heat-treating, gouging and scarfing replacement consumables in the world.

in new equipment to maintain
the highest quality*

ATTC ... Investment in Equipment

American Torch Tip has always felt it important to invest in the future. For example: Over the past 5 years alone, the company has invested an average of nearly 7% of sales each year in state-of-the-art equipment such as CNC and specially designed machines, computers and programs necessary to keep the company competitive and to maintain a leadership position in the production and sale of consumable parts used by the fabrication industry.

Engineering is constantly
checking tolerances,
a must in maintaining*

ATTC ... Investment in Research

If we are to find better and more efficient ways to do things like cut and weld metals, we must invest in research. If we want to give our customers more value for their money, we must invest in research. If we want to employ the latest technological advances on our manufacturing floor, we must invest in research. If we want to employ innovative ways to market our products, we must invest in research. Sounds rather daunting, doesn't it? It isn't, really. It's more about diligence and consistency: Keeping on top of current events – financial, technological, political, economical, global - and listening to our employees and customers. Then assessing the information we gather to see what effect, if any, it will have on our business.

At American Torch Tip, research is expected to add more value to our products while opening new opportunities to stay competitive, and profitable.

ATTC

SuperSource

ATTC ... Investment in Products

SuperSource. It's the brand name that identifies American Torch Tip as the largest single manufacturer of replacement consumables in the world. We did not achieve this position by playing follow-the-leader. Here are some recent achievements in product additions and improvements.

ATTC's **Plasma** Division now makes and stocks a wider range of plasma replacement parts than it ever has. The goal of our engineering department is to produce the highest quality plasma consumables available today while meeting increased customer demand.

One of engineering's accomplishments, ATTC's LongLasting® electrodes, has been proven to last up to 100% longer than comparable designs. ATTC also manufactures a new series of high quality plasma torches.

LASERTEC
LASER DIVISION OF AMERICAN TORCH TIP

ATTC's **Laser** Division produces and stocks one of the largest selections of consumable parts found in over 27 major systems used by the industry. Our product line now incorporates all of the most important consumables in use, and includes one of the most extensive inventories of replacement optics available to the industry.

Because both inquiries and orders for optics have become increasingly frequent, we decided to manufacture our own optics, employing the latest optics manufacturing and testing equipment to ensure the best quality. This gives us greater control over quality and cuts delivery time. It also enables us to manufacture either small or large quantities depending on our customer's needs.

ATTC[®]

THERMATEC
THERMAL SPRAY DIVISION OF AMERICAN TORCH TIP

ATTC's Thermatec Division's **Thermal Spray** product line has been expanded to include replacement consumables for most of the best known thermal spray equipment currently on the market. Our Thermal Spray products are the choice of many companies who need the ability to recoat, resurface or refinish parts in order to repair or strengthen

In addition to the consumables we make for over 16 major brands we recently expanded ATTC's **Lightning MIG** gun line by adding several new guns. Our guns range from 180 to 500 amps. Some Lightning guns carry a lifetime guarantee on the handle and trigger switch. The support consumables required for each gun are manufactured in our facilities, and all the cables and power pins are assembled by ATTC to meet customer requirements.

Our new 500 amp robotic gun designed with a tight fitting EasyChange gooseneck.

ATTC[®]

ATTC's **Multi-Use System** is the only system designed to save you up to 60% on replacement costs. How? By just changing the tip end instead of throwing away costly full-size oxy-fuel tips. Buy one adapter and keep it; it almost never wears out. And independent flame tests comparing ATTC's Multi-Use tip with a one-piece tip prove there is absolutely no difference in the flame, heat, or coverage.

ATTC manufactures **Oxy-Fuel** tips for all of the popular torches on the market today including some that are rare, obsolete, or no longer made. ... and we make them for all the gases. Over 20 brands in all used for cutting, welding, gouging and scarfing.

If you need a custom part, call us. Our engineering and manufacturing staff are very adept at solving customer fabrication problems.

ATTC stocks the most asked for TIG replacement parts. Lenses, collets, collet bodies, nozzles, handles, power cables, and much more. We also sell complete torch packages and power adapters, along with hookup, extension and accessory kits.

Need A Catalog?

ATTC has catalogs available for the asking.
Plasma, Laser, MIG, TIG, Oxy-Fuel, Thermal Spray, Multi-Use
and of course our Corporate Brochure and Price List.
